

# EXTERIOR **WOOD** *SILOXANE* WATERPROOFER

- Highly resistant to UV degradation
- Protects against water damage, mold, and mildew
- Can be used on new or green wood
- Long-lasting beading and waterproofing
- Prevents efflorescence
- Non Toxic
- Low to no odor
- Non-flammable
- Eco-friendly with zero VOCs
- Protects against de-icing salts and pool chemicals
- Dries clear without changing the surface appearance
- Dries in 1 to 2 hours
- Does not harm landscape plantings
- Apply in cold weather down to 34°F
- Easy clean up with soap and water
- Provides abrasion resistance
- Dries clear to ensure color stability
- Effective on porous & semi-porous substrates

## **WORKS ON VIRTUALLY ANY EXTERIOR WOOD SURFACE!**

Eco Advance Siloxane Exterior Wood Waterproofer is the most effective, easy-to-apply, eco-friendly, long-lasting waterproofer available. This product differs from most waterproofer because of its vapor transmission abilities which allow for long-term product and substrate performance. This allows substrates to still cure and prevents moisture from being trapped which can lead to a rapid degradation of the substrate. How can EA Exterior Wood Waterproofer repel water so effectively and yet manage to remain permeable to water vapor? To use an analogy, it functions like leaves do in nature . . . leaves hold water at bay allowing it to run off the surface but they also allow the plant to exchange gases with the environment.

1 Gallon Ready-to-Use  
16 oz. Liquid Concentrate
